

Six hypotheses, each scored on the quantity it actually claims to move

Treatment against the control that isolates its mechanism. A verdict needs $p < 0.05$ on the hypothesis's own metric; each cell prints treatment vs control.

H1 · head_on_conflicts lower is better	0 vs 0 no effect	0 vs 0 no effect	0 vs 0 no effect	0 vs 0 no effect
H2 · throughput higher is better	0.147 vs 0.151 no effect	0.153 vs 0.133 no effect	0.291 vs 0.291 no effect	0.416 vs 0.425 no effect
H3 · throughput higher is better	0.147 vs 0.15 no effect	0.153 vs 0.16 no effect	0.291 vs 0.285 no effect	0.416 vs 0.404 no effect
H4 · throughput higher is better	0.155 vs 0.14 supported	0.156 vs 0.0175 supported	0.255 vs 0.101 supported	0.421 vs 0.192 supported
H5 · throughput higher is better	0.147 vs 0.147 no effect	0.153 vs 0.153 no effect	0.291 vs 0.291 no effect	0.416 vs 0.416 no effect
H6 · total_travel_distance lower is better	5.26e+03 vs 5.33e+03 no effect	1.26e+04 vs 1.3e+04 supported	1.07e+04 vs 1.1e+04 no effect	1.44e+04 vs 1.45e+04 no effect
