

Every configuration against plain lifelong PIBT

Blue beats plain PIBT on that map; red loses to it. Percentage difference in throughput, with a two-sided permutation test over the same seeds; bold is $p < 0.05$.

aisleflow (full)	p = 0.06 +15%	p = 0.54 +17%	p < 0.05 -18%	p < 0.05 -17%
+ crowding	p = 0.06 +15%	p < 0.05 +36%	p < 0.05 -13%	p < 0.05 -15%
+ stay-in-lane bonus	p < 0.05 +22%	p < 0.05 +39%	p < 0.05 -28%	p < 0.05 -16%
+ deadlock recovery	p < 0.05 +22%	p = 0.17 +20%	p < 0.05 -28%	p < 0.05 -16%
+ turning cost	p < 0.05 +19%	p < 0.05 +50%	p < 0.05 -24%	p < 0.05 -18%
recovery, full ladder	p = 0.06 +15%	p = 0.54 +17%	p < 0.05 -18%	p < 0.05 -17%
recovery, uncorroborated	p = 0.10 +10%	p < 0.05 -87%	p < 0.05 -71%	p < 0.05 -62%
